

Numbers and Counters

Purpose: The purpose of this activity is to recognize and put the quantity to the numbers from one to ten and to teach the child to place the proper quantity beneath each numeral using the concepts of even and odd numbers.

Directions: Invite the child to work with the numbers and counters. Lay the numbers on the table in a mixed order and ask the child to place them in the correct order. Using the counters, place the appropriate quantity below each corresponding number showing the child how to arrange the counters and pairs. When there is an odd counter, show the child how to center it below the last pair.
